

Figure 13. Sprinkler irrigation of salt sensitive landscape plants should be kept below the plant canopy to avoid or reduce wetting of the foliage. Severe damage occurred to the lower leaves of this Chinese Pistache (*Pistacia chinensis*) irrigated with recycled water due to direct contact of salt on the leaves (upper left). Close-up view of lower leaves on Chinese Pistache irrigated with recycled water containing approximately 150 mg L^{-1} sodium and 300 mg L^{-1} chloride. Necrotic areas developed where the recycled water came in direct contact with the leaves (lower left).
